

Need a partner that addresses the challenges and hazards of powder dosing? **Custom Can!**

As a full-service contract development and manufacturing organisation, Custom Pharma Services can guide you through your entire programme — from preformulation through manufacturing, packaging and delivery.

- Unwavering customer service and a one-stop facility
- Creative and proactive project management
- Reliable services that are reflected in our approach, cost and delivery

Custom Pharma Services places value and confidence in our staff's ability to uphold the highest standards of professionalism and performance, helping to develop an active partnership with our clients. Fully certified in the UK and Europe, Custom Pharma Services is your one-stop resource for contract development and pharmaceutical manufacturing.

When you need a partner that can help with concepting, process and formulation development, prototypes, stability and analytical testing, certification, contract manufacturing, primary packaging, shipment, consultancy and customer support, **Custom Can!**

METTLER TOLEDO QUANTOS AUTOMATED DOSING SYSTEM

Custom Pharma Services is dedicated to optimising your dosing process, delivering safe and cost-effective micro-dosed capsule filling solutions for your Phase I clinical trial.

With direct dosing of your API into capsules, from 1mg/capsule upwards with 100% weight confirmation, this system is perfect for potent molecules with a low therapeutic dose where more advanced granulation technologies would typically be deployed.

Direct dosing into capsules ensures zero content uniformity issues for low dose products without the time and cost issues related to granulation.

Quantos has an intelligent and adaptive dispensing system with a wide powder handling capability. And, unlike conventional capsule fillers, the system can be set up with minimal amounts of API.

By using Quantos, batches can be manufactured with little setup overhead, saving time and money — no matter how poor the flow properties of your API are.

There are no minimum batch size requirements for Quantos projects. We can produce the exact number of capsules required for your early clinical batch needs.

Your manufacturing costs are directly scaled to the number of capsules you require, making this technology perfect for formulation prototypes or early clinical programmes.

When you need a safe, cost-effective and uniform micro-dose solution to fill capsules, **Custom Can!**

For more information on how the Quantos system can work for your project, get in touch:
